

Camila Villalba Heuer

Backend Engineer — Fintech — NestJS • TypeScript • React • PostgreSQL • Prisma • Java • Spring Boot
cbvillalbaheuer@gmail.com — +54 9 3743 47 40 82 — LinkedIn — GitHub

Professional Summary

Backend Engineer with experience developing fintech platforms and business applications using TypeScript, NestJS, Prisma and PostgreSQL. Skilled in designing REST APIs, building domain-driven solutions using DDD and Hexagonal Architecture, and developing distributed systems through event-driven communication using AWS services. Experience working with cloud infrastructure, asynchronous messaging and scalable backend architectures. Background in Chemical and Nuclear Engineering, bringing strong analytical skills and experience working in safety-critical environments. Passionate about building scalable financial systems and continuously growing toward technical leadership.

Technical Skills

Backend: Java, Spring Boot, Node.js, NestJS, REST APIs, JPA, Hibernate, Spring Cloud

Architecture: Microservices, Monolithic, Layered Architecture, Domain-Driven Design, Event-Driven Architecture

Frontend: React, TypeScript, HTML, CSS, Vite

Security: Spring Security, JWT, OAuth2, role-based authorization, service-to-service authentication

Testing: JUnit, Mockito, MockMvc, Jest, Supertest

Databases: MySQL, PostgreSQL, DynamoDB

Cloud & Tools: AWS (Cognito, SNS, SQS, Aurora RDS, DynamoDB, S3, Secrets Manager), CloudFormation (IaC), Redis, Docker, Git, GitHub, Swagger/OpenAPI

Professional Experience

Fullstack Developer — Helipagos Fintech

Jun 2026 – Present

Contribute to the development of a fintech platform focused on payment processing and financial services, building backend solutions that support secure, scalable and reliable financial operations.

- Contribute to the development of a fintech platform focused on payment processing and financial services, building backend solutions that support secure, scalable and reliable financial operations.
- Develop backend services and REST APIs using NestJS, TypeScript, Prisma and PostgreSQL/Amazon RDS.
- Build and evolve core financial modules, including money transfers, CVU management and user authentication with Amazon Cognito.
- Design and implement event-driven workflows for financial operations, using Amazon SNS and SQS to distribute and process events asynchronously, including webhook notifications triggered by transfer operations.
- Integrate with external payment providers by implementing API clients, request/response mapping and robust error handling.
- Design and implement business logic for financial operations with a focus on consistency, transactional integrity and scalability.
- Contribute to the use of Amazon DynamoDB and Redis caching strategies to support platform scalability and performance.
- Work with AWS infrastructure and cloud services, including CloudFormation for Infrastructure as Code, Secrets Manager for secure configuration management, and S3 for file storage.
- Migrate and modernize legacy functionalities while improving maintainability and reliability.
- Develop automated tests and actively participate in code reviews and technical design discussions.
- Develop frontend features using React and TypeScript, contributing to the end-to-end delivery of financial products.

Freelance Fullstack Developer - Dental Management System

Dec 2025 – Present

- Build frontend features using React and Vite.
- Develop backend services and REST APIs with NestJS, TypeScript, Prisma and PostgreSQL.
- Implement patient management workflows, including medical history records, treatments and odontogram functionalities.
- Design relational data models and business rules for clinical information management.
- Develop a modular application structure focused on maintainability and future scalability.

- Collaborate on product evolution, user experience decisions and feature prioritization.

Head of Maintenance & Operations – RA-10 Nuclear Reactor (CNEA)

Mar 2023 – Oct 2025

- Led operations in a **nuclear research reactor**, ensuring safety and reliability
- Developed and optimized technical procedures and operational processes
- Performed technical analysis and troubleshooting in critical systems
- Coordinated cross-functional teams and continuous improvement initiatives

Selected Projects

Backend System – PsyCare (Psychological Practice Management API)

Aug 2025 – Dec 2025

Developed the backend for a clinical management application, implementing REST APIs, authentication, role-based authorization and business logic using Spring Boot, following layered architecture and best development practices.

Technologies: Java, Spring Boot, MySQL, JWT

link: [GitHub](#)

Microservices Architecture – Online Store (Java, Spring Boot, Spring Cloud, Docker)

Aug 2025

– Jan 2026

Designed and developed a microservices-based e-commerce backend using Java, Spring Boot, Spring Cloud, Eureka, OpenFeign, Resilience4j and Docker, applying distributed systems principles, service discovery and API Gateway patterns.

Technologies: Java, Spring Boot, Spring Security, Spring Cloud, Docker, MySQL

link: [GitHub](#)

Education

Specialization in Technological Applications of Nuclear Energy

Balseiro Institute / UBA (2022)

Chemical Engineering (Environmental Orientation)

National University of Misiones (2015 – 2021)

Additional Training

Backend Development (Spring Boot, Microservices, Security, Testing)

SQL and Relational Databases

NoSQL Databases (DynamoDB, Redis)

Python for Data Analysis (Pandas, NumPy, CI/CD)

Power BI and Data Analysis

Languages

Spanish (Native)

English (B1)
